

L7239L Gymleco Recumbent bike, commercial with big LED display

Cardio Machines

The Gymleco Recumbent Bike offers a variety of functional features to contribute to a comfortable and gentle training experience. For example that it's generator driven which means no electricity needed. It's also designed with easy adjustments and settings, which makes it possible for everyone to use the cardio machine.

The generator driven exercise bike from Gymleco is designed in high quality plastic parts, to be both stable and silent. The Recumbent Bike is manufactured for commercial gym facilities and comes fully loaded with all the most requested features. This Recumbent Bike is made to suit all users regardless of age and level of training. This model of exercise bikes are usually found on professional gyms.

The ergonomic backrest makes the exercise bike comfortable and easily set at the right angle from a sitting position. The distance between pedals and seat is set easily to fit all body lengths, whether shorter or longer. With an open space between the seat and handlebars for maximum access a seat is easily moved closer or further from the handlebars.

- LED display showing time, distance, rpm, speed, level, calorie burn, heart rate and power.
- You select one of the 18 programs with a few simple keystrokes.
- With the wheels you can easily move it to the desired position.
- The handles have a heart rate monitor and easy adjustment of the resistance level.

Length	Width	Height	Weight	Max User Weight
180 cm	71 cm	133 cm	80 kg	180 kg

- Clean with a gentle detergent.
- Always clean the machines with electricity off.
- Keep your machines free of dust and dirt by continuously vacuuming in, under and around the machine.

- Cleaning with alcohol can damage the machine parts and shorten the lifespan.
- Do not expose the products to damp environments or liquid.
